25X1

1. A mine detector is at present under development at Funkwerk Koepenick, where use is being made for purposes of comparison of an American device equipped with plate-type probe (Tellersonde), and a German one of the "Wien" type.
2. Both have a penetration depth of 50 cm. and Funkwerk Koepenick is trying to produce a detector with a penetration depth of 80 cm., since this would appear to be the penetration depth of the detector made by Werk Leipzig.
3. These mine detectors are for the use of the KVP.
